

The accountability layer between what a sales coach *teaches* and what reps do on Monday morning.

One Click Coaching scores every sales call against your team's methodology — automatically — and delivers same-day coaching queued for manager approval. No manual tracking. No spreadsheets. Just behavior that sticks.

THE PROBLEM

Training has a *half-life*.

You invest in Sandler, MEDDIC, SPIN, or Challenger. Reps are bought in. The workshop ends — and within weeks they drift back to old habits. Managers can't spot it in time. The quarter closes. Nobody can prove the training worked.

84%

of training content
forgotten within 30
days

90%

gone within 90 days
— regardless of
training quality

2%

of training content
applied in real selling
situations

THE SOLUTION

AI-powered call scoring, *methodology-aligned*.

Integrates with HubSpot and Fathom. Every call transcript scored against your team's chosen methodology. Reps receive short, specific coaching within hours — not days. Managers approve before it's sent. The system learns each rep and never repeats itself.

Supports: Sandler · MEDDIC/MEDDPICC · SPIN · Challenger · Gap Selling · Custom

Integrates: HubSpot · Fathom

Pricing: \$50/rep/mo · 14-day trial

THE SCORE METHOD™ — PROPRIETARY

Not training. The system that makes *training permanent*.

Five steps. Continuous. Automatic. Call by call. Works with the methodology your team already runs.

S

Surface

The gap between what was trained and what happened on the call — made visible, automatically.

C

Capture

Every conversation analyzed against your methodology — no manual input, no rep friction.

O

Observe

Rep behaviour measured call by call — managers see exactly where drift is happening, across the whole team.

R

Reinforce

Specific feedback delivered before the next call — not in the debrief next week, when it's already too late.

E

Embed

Permanent behaviour change. Not a training event. A new standard — executed on every call, by every rep.

"The gap between training and performance isn't a skills problem — it's a reinforcement problem."
